

■ LeftOver Link – Connecting Restaurants with the Needy

Problem Description:

Every day, a large amount of food is wasted in restaurants, hotels, and wedding events. Even when people want to donate the extra food, they often don't know how or where to do it. On the other hand, NGOs and shelter homes are constantly searching for food donations but struggle to find a consistent source. There's also no proper system for coordinating food pickup, delivery, or tracking. As a result, good food often ends up in the trash while many people go to sleep hungry.

Solution:

LeftOver Link is a smart platform that automatically connects restaurants or event organizers with nearby NGOs and volunteers who can collect and distribute leftover food. The system uses location-based matching, live notifications, and real-time tracking to make the process quick and efficient. Restaurants can upload information about available food, NGOs receive instant alerts, and volunteers can pick up and deliver the food while being tracked on the map.

How It Works:

1. A restaurant posts details of leftover food with a photo and location.
2. The system automatically finds nearby NGOs or volunteers within a few kilometers.
3. They receive instant notifications and can accept the pickup request.
4. The volunteer's live location is tracked until delivery is complete.
5. Everyone gets a confirmation and reward points for their contribution.

Key Features:

- Live tracking of food pickup and delivery.
- Real-time notifications for nearby NGOs.
- Reward system for restaurants and volunteers.
- Easy photo and location uploads.
- Data insights to reduce food waste over time.

Why It's Helpful for the Future:

1. Reduces food waste and helps the environment.
2. Provides daily meals to people who need them most.
3. Encourages a culture of food donation in society.
4. Creates social goodwill for restaurants and caterers.
5. Can expand across cities and integrate with food delivery apps or government NGOs in the future.

Future Vision:

LeftOver Link aims to become India's largest food redistribution network — where no meal is wasted, and no person goes hungry. Just like ride-sharing apps connected people with travel, LeftOver Link connects kindness with hunger.
